01 Introduction

We believe that sustainable development is the baseline for future industrial success. Through the deliberate integration of efficiency and ethical business practices, we catalyse shared prosperity for our partners while championing India's sustainable infrastructure goals.

Horizon's foundational 'Promise of More' shifts the focus from simple asset development to true value creation. Our business strategy is rooted in responsible stewardship: elevating workforce welfare, catalysing community growth, and engineering resilient warehousing assets. For us, doing good is the blueprint for doing well.

Welcome to our FY 2025-26 Sustainability Report. This year's disclosure captures a transformative phase in our sustainability journey. It delivers a clear, evidence-based view of how we translate Environmental, Social, and Governance (ESG) priorities into measurable operational impact across our national footprint.

Reporting Frameworks

Global Reporting Initiative (GRI) Universal Standard 2021

GRESB 2026 Real Estate Assessment Standard

United Nations Sustainable Development Goals (UN SDGs)

National Guidelines on Responsible Business Conduct

Report Boundary

This report covers 13 fully operational assets, 5 partially operational assets that are also partially under development, and 12 development-stage locations within Horizon's portfolio. Detailed non-financial disclosures related to selected indicators for these assets are included in Annexure.

Note: 15 out of the 45 assets are currently in the Planning stage and therefore are not included within the reporting boundary.

Feedback and Contact

For any feedback or suggestions on the report you may write to us at esg@hiparks.com or contact us at +91 2241581000

Assurance

BSI (British Standards Institution) has carried out an independent limited assurance exercise in accordance with ISAE 3000 (Revised) to verify the non-financial indicators presented in this report. This is for the period 1 April 2025 to 31 March 2026 (FY 2025-26). It covers select non-financial disclosures against GRI Standards 2021 (GRI 204, 205, 206, 301, 302, 303, 305, 306, 401, 402, 403, 404, 405, 406, 407, 408, 409, 413 & 418). The assurance statement is published in full in the report.

Forward-looking Statement

This report provides an integrated overview derived from historical data, current insights, and reasonable assumptions. Certain sections contain forward-looking perspectives that outline the organisation's expected direction, priorities, and sustainability commitments. These projections may evolve in response to changing market conditions, industry developments, regulatory shifts, and other external factors. Therefore, they should not be regarded as definitive guarantees of future performance.

Message from Our Leadership

Anshu Prakash

Chairman and
Non-Executive
Independent Director

Growth that overlooks environmental and social responsibility may deliver short-term gains, but it cannot create enduring value for businesses, communities, or the economy.

Sustainable growth requires balancing economic ambition with responsible stewardship. This requires thoughtful leadership, informed decision-making, and a commitment to creating value that extends beyond immediate business outcomes.

As a company operating in logistics, warehousing, and industrial real estate, Horizon Industrial Parks' responsibility extends beyond developing physical infrastructure. We seek to create long-term value for our tenants, investors, employees, and the communities connected to our operations.

This responsibility influences how we make decisions, allocate capital, manage risks, and evaluate opportunities. Sustainability is therefore not treated as a standalone initiative, but as an integral part of Horizon's approach to business. It guides us in building resilient assets, supporting responsible resource management, and creating infrastructure that can remain relevant in a rapidly evolving world.

Horizon's Board of Directors is fully committed to sustainability as we are to strong governance and accountability. As expectations around corporate responsibility continue to evolve, I believe organisations must demonstrate transparency, ethical conduct, and disciplined oversight. These principles are fundamental to building trust and strengthening long-term stakeholder confidence.

As we look ahead, our focus remains clear: to support industrial growth through responsible development, strong governance, and a long-term perspective. Through this approach, we aim to create lasting value while contributing positively to society and the environment.

Our focus remains clear: to support industrial growth through responsible development, strong governance, and a long-term perspective. Through this approach, we aim to create lasting value while contributing positively to society and the environment.

Urvish Rambhia

Chief Executive Officer
and Managing Director

India's logistics and industrial real estate sector is undergoing one of the most significant transformations in its history. Rapid manufacturing expansion, supply chain diversification, e-commerce growth, and large-scale infrastructure investments are redefining the expectations from industrial and logistics infrastructure across the country.

At the same time, customers, investors, and global occupiers increasingly expect infrastructure that is not only operationally efficient, but also sustainable, resilient, technology-enabled, and people-centric.

At Horizon Industrial Parks, we recognised early that the future of industrial infrastructure would be defined by integrated ecosystems rather than standalone assets. Today, we have built one of India's largest Grade A industrial and logistics platforms with 45 parks across 10 key markets, covering more than 2,200 acres and offering 58 million sq. ft. of development potential. More than 60% of our customers are Fortune 500 companies, reflecting the trust global businesses place in the quality, scalability, and reliability of our infrastructure.

This growth has been guided by a clear philosophy – infrastructure must create long-term value not only for business, but also for people and the environment. Our parks are designed as human-centric and future-ready ecosystems that support operational efficiency, workforce wellbeing, sustainability, and business continuity.

What differentiates Horizon is our ability to combine institutional scale with operational discipline and long-term thinking. Backed by Blackstone's global expertise and best practices, we continue to strengthen our position as a trusted partner for India's evolving manufacturing and supply chain ecosystem.

We believe sustainability and business performance are not competing priorities. Efficient infrastructure reduces operating costs. Resilient assets improve continuity and long-term value creation. Responsible development strengthens stakeholder confidence and future-proofs growth.

As India strengthens its position as a global manufacturing and supply chain hub, industrial infrastructure will play a defining role in enabling this growth responsibly. Horizon remains committed to building high-quality industrial ecosystems that contribute meaningfully to economic progress, environmental stewardship, and long-term national development.

Our parks are designed as human-centric and future-ready ecosystems that support operational efficiency, workforce wellbeing, sustainability, and business continuity.

R K Narayan

Chief Investment Officer

In industrial and logistics real estate, sustainability is no longer an aspiration positioned outside business operations. It has become a critical driver of operational efficiency, asset resilience, investor confidence, and long-term value creation.

At Horizon Industrial Parks, we view ESG through a highly operational lens. The real impact of sustainability is created through thousands of decisions made every day across energy management, water stewardship, safety practices, renewable energy integration, waste handling, maintenance standards, and operational governance.

Managing industrial infrastructure at scale requires sustainability to move beyond commitments into measurable execution. Over the past year, we continued to strengthen operational ESG performance across the portfolio through focused implementation and disciplined monitoring systems.

Our installed rooftop solar capacity increased to 23.45 MWp, contributing to an annual emissions reduction of 29,681.73 tCO₂e across the portfolio. We also maintained 100% LED implementation, 100% water recycling, and rainwater harvesting systems across all parks, reinforcing our commitment to resource efficiency and responsible infrastructure operations.

Equally important is governance and operational accountability. During the reporting year, 100% of employees were trained and sensitised on conduct and ethics, while maintaining zero major non-compliance incidents in Environment, Health & Safety (EHS). ESG policy adoption also continued across the organisation, strengthening consistency in implementation and oversight.

Our approach is guided by a simple principle: operational excellence and sustainability are deeply interconnected. Efficient assets are more resilient. Resource-conscious operations improve long-term performance. Strong governance enables disciplined execution and continuous improvement.

As our portfolio continues to scale, our focus remains on embedding sustainability into everyday decision-making through stronger systems, accountability, collaboration, and continuous improvement. At Horizon, ESG is not managed as a standalone agenda. It is integrated into how we build, operate, and future-proof our infrastructure assets.

Over the past year, we continued to strengthen operational ESG performance across the portfolio through focused implementation and disciplined monitoring systems.

Organisation Overview

Horizon Industrial Parks is India's fastest growing developers of Grade A industrial and logistics parks, building essential and irreplaceable infrastructure critical for enabling of supply chains.

Horizon parks are high-performance ecosystems powering India's manufacturing and enabling efficient storage and movement of goods.

of our clients are
FORTUNE 500
companies.

Blackstone

As a Blackstone logistics platform, we leverage the group's vast experience in global real estate management and best practices, with our deep local expertise to deliver world class and premium industrial and warehousing solutions.

The organisation serves more than 100 customers across different sectors.

Manufacturing

e-commerce

Logistics

Automotive

Engineering

Retail

Today, We

Manage

45 parks

Across

10 major markets

These parks span over

2,200 acres

Offering

58 million sq. ft. of leasable space

Beyond warehousing assets, Horizon focuses on building high-performance, future-ready ecosystems that enable sustainable growth and operational efficiency. Our parks are designed to global standards and integrate smart facilities, renewable energy solutions, efficient water management, and sustainable building practices.

Horizon also provides integrated solutions to help businesses scale efficiently without heavy upfront investments. These solutions include turnkey factories, energy integration, cold storage, and staff accommodation.

Through our commitment to sustainability, innovation, and strong governance, Horizon Industrial Parks aims to create long-term value for businesses, communities, and the environment. At the same time, the organisation supports India's transition towards a more resilient and competitive industrial future.

Corporate Overview

ESG Vision

To set new benchmarks for India's industrial and logistics sector by delivering more than spaces, building responsible, future-ready ecosystems that serve our customers, communities, and climate.

Mission

Deliver beyond carbon reduction, enabling decarbonised operations and climate resilience.

Lead with a design-first mindset, integrating sustainability and global best practices.

Embed diversity, health, safety, and learning into our people and community practices.

Build trust through accountable governance, strong partnerships, and transparent performance.

Values

Our core values - agility, collaboration, and excellence - form the foundation of our identity and drive our sustainability journey.

Agility:

Proactively respond to the evolving needs of our stakeholders, ensuring timely and effective solutions.

Collaboration:

Foster mutual respect and teamwork, building strong partnerships that enhance our collective impact.

Excellence:

Motivates us to continuously raise the bar, setting and exceeding benchmarks that contribute to long-term value creation.

Together, these values guide our actions and decisions, enabling us to create a more sustainable and inclusive future for all.

Our Four Growth Pillars

Sustainability is at the core of how we develop and manage world-class industrial and logistics infrastructure across India. With a pan-India presence and deep-rooted expertise in acquiring, developing, and operating logistics real estate, we are committed to creating long-term value for businesses. Our integrated approach provides our customers end-to-end solutions that enable them to thrive in a rapidly evolving landscape. Our comprehensive suite of solutions is guided by four growth pillars:

Right Fitted

- Identify and fast-track optimal expansion opportunities for clients
- Support client scaling across India
- Assist in selecting ideal locations, including in-city sites
- Offer ready-to-move facilities and fully built-to-suit solutions

1

2

Efficient

- Offer integrated solutions for timely delivery with 100% compliance
- Leverage latest technology across all operations
- Plan proactive land acquisition and speculative project development
- Reduce time-to-market for clients

Hands-On

- Industry veterans use a consultative approach to deliver context-specific solutions
- Develop customised solutions within Grade A parks
- Expertise spans sectors including third party logistics, e-commerce, automotive, aerospace, engineering, FMCG, and retail

3

4

Sustainable

- Committed to meaningful ESG initiatives beyond compliance
- Promoting diversity and inclusion, with a focus on integrating differently-abled employees in property management
- Encourage partners and vendors to follow our ethical and governance framework

Awards

Horizon Industrial Parks Farukhnagar I wins ET Real Estate Conclave Awards 2026

Horizon Industrial Parks Bilaspur rewarded IGBC Performance Challenge Award for Green Built Environmental 2025 by IGBC

Horizon Industrial Parks wins "Sustainable Organization of the Year 2025" at the UBS Forums Sustainability Summit & Awards

Horizon Industrial Parks wins Realty+ Conclave Excellence Awards 2025

CII Performance Excellence Awards 2025: Horizon Industrial Parks Recognised for Sustainability Leadership

Sustainability Alliances and Certifications

United Nations
Global Compact

We are committed to the Ten Principles of the United Nations Global Compact, which serves as a foundational framework guiding our approach to responsible business practices.

Horizon is a signatory of the India Business and Biodiversity Initiative (IBBI), a business-driven platform that promotes the integration of biodiversity and natural resource conservation into core business strategies.

We are certified by the Indian Green Building Council (IGBC), which signifies that our properties are designed and operated in accordance with green building standards, focusing on energy efficiency, water conservation, waste reduction, and improved indoor environmental quality.

We operate under an Integrated Management System (IMS) certified to ISO 9001 (Quality Management), ISO 14001 (Environmental Management), ISO 45001 (Occupational Health & Safety Management), and ISO 27001 (Information Security Management) standards.

We participate in the Global Real Estate Sustainability Benchmark (GRESB) for both standing investments and development assets, reaffirming our commitment to measuring and strengthening our ESG performance against global standards.

As part of the Blackstone portfolio, we are proud members of the Urban Land Institute (ULI), enabling us to stay connected with global best practices, industry leadership, and collaborative platforms that promote responsible land use and sustainable real estate development.

02

ESG Landscape

Our ESG performance reflects the progress we have made towards building more efficient, resilient, and responsible industrial ecosystems. This chapter presents the key milestones that define our environmental, social, and governance journey during the reporting year.

Performance Highlights

Environmental

Renewable Energy Initiative

Expanded rooftop solar infrastructure to strengthen renewable energy adoption and support low-carbon operations.

Increased installed solar capacity from

13.98 MWp
(FY 2024-25)

22.10 MWp
(FY 2025-26)

reflecting strong renewable energy expansion

Renewable energy share increased from

demonstrating progress towards cleaner energy transition

Continued focus on sustainable energy management, operational efficiency, and long-term decarbonisation initiatives

Solar Energy Generated

41,805.25
MWh in FY 2025-26

Facility for E mobility

Expanded EV charging infrastructure to support low-carbon mobility and sustainable transportation across operational parks.

EV Charging Infrastructure Expansion

EV charging facilities deployed across

14 operational parks.

Strengthened cleaner mobility adoption for employees, logistics personnel, and visitors to support **Scope 3 emission reduction** initiatives

151 EV chargers
(2 wheelers and 4 wheelers) installed

1,076 kW total charging capacity

Continued focus on expanding EV infrastructure and advancing future-ready, low-carbon industrial ecosystem development.

Water Stewardship

In FY 2025-26

100% water reuse, recycling every treated supply for flushing and irrigation

Waste Management

In FY 2025-26

99% of non-hazardous waste generated on site was recycled

100% ESG screening of top Tier 1 vendors

100%

of the portfolio covered under embodied carbon assessment

100%

of the portfolio covered under physical climate risk and transition risk assessment

Social

7400+

tenants employee engaged through multiple activities

100%

of the portfolio covered under Socio-economic Vulnerability assessment

Diversity, Equity, Inclusion

We established a roadmap towards achieving a

2%

of our workforce comprises from the PwD category

19%

female workforce participation

36%

women in Senior Management

supporting greater inclusivity and balanced workforce representation.

Human Capital Development

8.5

training hours per employee achieved.

We intend to enhance organisational sustainability awareness by targeting

100%

of leadership and employees are covered under ESG and sustainability training.

Occupational Health and Safety

0

Lost Time Injury Frequency Rate (LTIFR)

0

Total Recordable Injury Rate

0

Absentee Rate

Governance

Corporate Governance

16%

female director on the board

50%

Independent Directors on the board

100%

supplier covered Supplier Code of Conduct

100%

statutory compliance

19

GRI criteria verified under limited third party assurance

0

data privacy & cybersecurity breaches

Maintain ISO 9001, ISO 14001 & ISO 45001 & ISO 27001 certification across parks

Materiality Assessment Process

Our sustainability approach is guided by a clear understanding of the environmental, social, and governance issues that have the greatest influence on both stakeholder interests and long-term business value. In 2025, we undertook a detailed materiality assessment to evaluate and prioritise these key topics.

Drawing on perspectives from a diverse group of stakeholders - including employees, customers, investors, and community representatives - we gained insights into the issues that matter most. The outcomes of this assessment help shape our sustainability priorities, inform strategic decision-making, and ensure our actions remain aligned with stakeholder expectations, emerging trends, and leading industry practices.

Approach to Review Existing Material Topics

- Determine the risk, both positive and negative effects (inside out), and also the opportunities from previously identified material topics.
- Examine the opportunities, dangers, and impacts and evaluate them using a score based on the estimation of the various criteria.

Finalise the material topics.

Materiality Matrix and Prioritised Topics

● Environment

● Social

● Governance

High-Priority

- Energy and Emission Management
- Climate Strategy
- Green Building
- Occupational Health and Safety
- Corporate Governance
- Business Continuity and Risk Management
- Stakeholder Engagement
- Tenant Experience
- Data Privacy
- Information Security

Medium-Priority

- Waste Management
- Water Stewardship
- Sustainable Supply Chain
- Human Capital Development
- Diversity, Equity and Inclusion
- Reporting and Assurance

Low-Priority

- Biodiversity
- Corporate Social Responsibility

Stakeholder Engagement

Stakeholder engagement is central to our sustainability approach, aligning our goals with the expectations of those impacted by our operations. We maintain regular and transparent communication to build trust and strengthen relationships.

Engaging with employees, clients, communities, and regulators helps us understand diverse perspectives, anticipate risks, and identify opportunities. It also enables collaborative solutions that create shared value.

Approach to Stakeholder Engagement

Stakeholder	Goal of Engagement	Mode of Engagement	Frequency of Engagement
 Employees	Diversity, equity, and inclusion; Health, safety, and well-being; Employee engagement; Human rights	Employee engagement survey; Management reviews; Townhall meetings	Annually / As required
 Tenants	Operational performance; Park safety & services; Sustainability initiatives; Community engagement	Regular meetings; Tenant feedback surveys; Joint sustainability initiatives	Quarterly / As required
 Local Communities	Social development programmes; Infrastructure support; Health, education & environment initiatives	CSR projects; Community meetings; Site visits	Annually / As required
 Government Bodies	Regulatory compliance; Environmental clearances; Safety and operational approvals	Regulatory submissions; Review meetings; Site audits	As per statutory requirement
 Suppliers and Contractors	Labour standards & safety compliance; ESG alignment; Fair business practices	Vendor evaluation; Safety induction & training; Performance reviews	Annually / Project-based
 NGOs / Local Organisations	Community outreach programmes; ESG partnerships; Social welfare initiatives	Collaborative programmes; Joint awareness drives; Health and education camps	As per programme schedule

03

Approach & Targets

Our sustainability approach is built on clear priorities and measurable outcomes. By understanding what matters most to our stakeholders, we focus our efforts where they create the greatest environmental, social, and business impact.

Our ESG Strategy

Horizon's sustainability strategy aims to improve operational resilience and efficiency while reducing environmental impact. To help reduce fuel consumption and emissions, we prioritise energy-efficient infrastructure and route optimisation technologies. These are the few of measures towards decarbonising our supply chain. They also help satisfy consumer demands for ethical solutions rather than mere improvements.

Additionally, we have integrated sustainability into all aspects of our decision-making processes, including vendor relationships and site selection.

Every new facility is evaluated for its potential to promote biodiversity, water efficiency, and local community involvement in addition to its logistical viability.

Before implementing sustainable practices on a large scale, our teams actively work together across sites to test and improve them.

This financial year, Horizon has adopted a thorough ESG strategic framework. This framework demonstrates our dedication to sustainable business practices.

Approach

We updated our material topics this year to reflect evolving stakeholder expectations and the changing sustainability landscape. The materiality assessment was refined to remain relevant to current social, environmental, and economic priorities.

This update ensures our sustainability focus stays aligned with the most pressing issues and enables more targeted and effective action.

The Pillars of Our ESG Strategic Framework

▼ Sustainability Built Environments

The environmental pillar underpins long-term growth by aligning operations with stakeholder expectations and global environmental priorities. Its key focus areas include circular innovation and a structured Net Zero roadmap.

Net Zero pathway drives greenhouse gas reduction through

- science-based targets
- renewable energy
- energy efficiency
- carbon offsets

At the same time, circular economy practices like

- waste reduction
- resource optimisation
- product life extension

enhance innovation and cost efficiency.

Collectively, these initiatives strengthen brand value and position the business competitively in a resource-constrained, climate-conscious market.

▼ Responsible and Transparent Growth

The governance pillar ensures responsible, transparent, and aligned growth. It is guided by key focus areas such as an ESG leadership framework, ethical and transparent operations, and ESG-linked compensation.

The ESG leadership framework embeds sustainability into decision-making across all levels, providing clear direction and oversight. Ethical and transparent practices build stakeholder trust, support compliance, and reduce regulatory and reputational risks.

At Horizon, ESG is pivotal to how we design, operate, and scale our logistics and warehousing services. We aim to minimise our environmental footprint through energy-efficient facilities, optimised transport networks, responsible waste management systems, and the adoption of cleaner technologies. We also prioritise the safety and well-being of our workforce, promote inclusive growth, and maintain strong governance practices built on transparency and accountability.

With each passing year, we reinforce our commitment to sustainability through green building certifications, robust ISO-integrated systems and community-focused CSR initiatives.

Our vision is to create a resilient ecosystem that not only delivers value to our customers but also contributes positively to society and the environment. With this, our commitment to building resilient and sustainable infrastructure becomes stronger. Our efforts to enhance biodiversity and improve energy efficiency deepen. Our renewable energy initiatives also become more closely aligned with evolving sustainability priorities.

Together with our stakeholders, we aim to create future-ready and environmentally responsible logistics ecosystems.

Our vision is to create a resilient ecosystem that not only delivers value to our customers but also contributes positively to society and the environment.

▼ People and Communities First

The social pillar focuses on building a resilient, inclusive, and high-performing organisation. It is driven by key priorities such as People First, the Community Impact Hub, and Safe and Sustainable Worksites.

Safe and sustainable workplaces promote a strong culture of safety and accountability, while improving productivity and protecting employee well-being. The Community Impact Hub strengthens local engagement, fosters positive social impact, and reinforces the organisation's social licence to operate.

Ethical and transparent practices build stakeholder trust, support compliance, and reduce regulatory and reputational risks. ESG-linked compensation aligns incentives with sustainability goals, strengthening accountability and performance. Together, these elements promote strong governance, enhance investor confidence, and support resilient, future-ready growth.

Our sustainability strategy is guided by a clear understanding of stakeholder priorities and long-term value creation. In 2024, we conducted a comprehensive materiality assessment to identify and prioritise key ESG issues.

We engaged internal and external stakeholders, including employees, clients, investors, and communities, and aligned the process with industry best practices, peer benchmarking, and standards such as GRI and SASB.

Inputs were gathered through surveys and consultations, and topics were prioritised using a materiality matrix based on stakeholder importance and organisational impact. This ensures focused action on areas of highest relevance.

Sneha Zagade

Head of
Sustainability & ESG

Sustainability Targets

Material Topics	Targets	Status (FY 2025-26)	UN SDGs Impacted
 Water Stewardship	Use 100% of recycled water for irrigation and flushing by FY2027	In progress	  
 Waste Management	Zero waste to landfill (construction / development projects) by FY2030	In progress	 
 Energy and Emission Management	Total solar power capacity of 25 MWp by 2026 Scope 1 and Scope 2 Emission Reduction Target (Aligned with SBTi 1.5 Deg. C Pathway) 65% by FY2035 90% by FY2050 15% reduction in energy consumption within 3 years of acquisition	In progress In progress In progress	
 Green Building	100% of operational parks to be green building certified by FY2026 New acquisitions to be certified within 3 years from year of acquisition All development projects to be green building pre-certified/certified	In progress In progress In progress	
 Climate Strategy	100% of the portfolio to be covered for Physical and Transition Risk Assessment by FY2030, in accordance with IFRS S2 reporting guideline.	Achieved	
 Sustainable Supply Chain	ESG scoring for key vendors; ESG clauses in all contracts by FY2027 10% raw material (quantity) to be green certified or recycled for new/ renovations construction by FY2028	In progress In progress	
 Diversity, Equity, and Inclusion	20% female workforce by FY2028	In progress	 
 Stakeholder Engagement	100% tenant coverage for satisfaction survey by FY2028 to be conducted by third party 100% employee coverage for satisfaction survey by FY2028 to be conducted by third party	In progress In progress	

Sustainability Targets

Material Topics	Targets	Status (FY 2025-26)	UN SDGs Impacted
 Human Capital Development	100% of employees to be covered for ESG related training by FY2026 Minimum of 15 hours of training per employee annually, encompassing both ESG-related and general professional development topics by FY2028	Achieved In progress	
 Occupational Health and Safety	Absentee Rate: Maintain annual absenteeism rate below 2% Injury Rate: Reduce recordable injury rate by 10% year-on-year reduction in Total Recordable Injury Rate (TRIR) Lost Day Rate: Limit lost workdays due to injuries to less than 20 per 100 employees annually.	Achieved Achieved Achieved	
 Corporate Governance	Conduct risk assessment focused on ESG by FY2026 Being 100% compliant to all statutory norms	Achieved Achieved	  
 Data Privacy and Information Security	Maintain zero critical security breaches per year Maintain 99.9% system uptime with a robust disaster recovery plan	Achieved Achieved	
 Reporting and Assurance	GRI and/or BRSR reporting on an annual basis Third party assurance of non-financial data	In progress In progress	

04

Environmental

At the heart of Horizon's ESG journey lies a deep recognition of the environment as a critical pillar of long-term sustainability. Environmental performance is not treated as a standalone metric but as an integral part of how we design, operate, and evolve our business. Through continuous improvement in resource and energy efficiency, waste management, and responsible environmental practices, Horizon reinforces its commitment to creating lasting value while safeguarding natural ecosystems for the future.

Energy and Emission Management

Horizon envisions a sustainable future powered by resilient, future-ready industrial infrastructure with a significantly reduced environmental footprint. Resource and energy efficiency are not just priorities but foundational pillars of our operational strategy, guiding every decision from design and development to ongoing operations. Across our entire portfolio, we embed smart, sustainable practices and innovative technologies that minimise impact, improve performance, and create long-term value for our stakeholders and the communities we serve.

Solar at Scale: Rooftop Renewable Energy Building Energy Efficiency

Our decarbonisation journey is driven by an expanding renewable energy footprint, most visibly through the large-scale deployment of rooftop solar infrastructure that transforms industrial roof spaces into clean energy hubs. This initiative strengthens our operational resilience, accelerates our long-term Net-Zero ambitions, and supports the shift towards a cleaner, more sustainable industrial ecosystem.

By optimising our energy mix with on-site solar generation, we provide tenants with reliable, sustainable, and cost-effective power solutions, creating shared value for our partners, communities, and the environment.

Horizon's Renewable Energy (RE) Transition

Solar installation growth

The graph illustrates a strong acceleration in Horizon's renewable energy transition, with installed rooftop solar capacity increasing by approximately 58% between FY2025 and FY2026.

Over the same period, the percentage share of renewable energy in our overall energy mix grew by about 89%, underscoring Horizon's strengthened commitment to renewable energy adoption, reduced reliance on fossil fuels, and steady progress towards our long-term decarbonisation and sustainability goals.

Increase in RE share

The graph shows a significant increase in renewable energy share from 14.73% in FY 2024-25 to 27.89% in FY 2025-26.

In FY 2025-26, Horizon's energy intensity was

0.00022 MWh per sq. ft

reflecting our continued focus on managing energy use efficiently across our operational portfolio.

In FY 2025-26, our rooftop solar installations generated

41,805.25 MWh of clean electricity.

This is estimated to have avoided approximately

29,264 tCO₂e of emissions

equivalent to the annual carbon sequestration of around **1.4 million trees** - demonstrating the significant environmental impact of Horizon's renewable energy initiatives.

Charging Ahead: Expanding Our EV Infrastructure

GRESB Energy / Low-carbon Infrastructure

At Horizon, efficient resource and energy management is central to our sustainability journey. In line with our low-carbon and resource-conscious approach, we have deployed EV charging infrastructure across select parks for both two-wheelers and four-wheelers, providing convenient access for employees, occupiers and visitors. This initiative promotes cleaner mobility, supports Scope 3 emissions reduction, and advances our vision of sustainable, future-ready industrial spaces.

EV Charging Infrastructure at a Glance

Park Coverage

56%

14 parks have EV charging infrastructure

Installed Capacity

1,076 kW

of total capacity

Total Chargers Installed

151

(2 Wheelers + 4 Wheelers)

Growth Momentum

Expanding infrastructure across more parks to meet growing demand

Project Progress Overview

44%

In Progress / Planned

56%

Completed

The pie chart indicates that 56% of our EV charging park projects are completed, with the remainder in various stages of development. This reflects meaningful progress in expanding EV infrastructure while maintaining a healthy pipeline of upcoming projects to support the continued growth of electric mobility across our parks.

Energy Efficiency 302, 305

Horizon is committed to embedding energy efficiency and renewable energy adoption as foundational elements of its sustainable infrastructure strategy. The organisation recognises that energy consumption is one of the most significant environmental and operational levers within its portfolio. To address this, we have implemented a comprehensive, multi-pronged approach. It focuses on reducing energy intensity and transitioning to cleaner energy sources. It also aims to future-proof its assets against rising energy costs and tightening climate regulations.

Emissions Management 305

Horizon's climate strategy is anchored in globally recognised best practices and robust GHG emissions management. We apply internationally accepted methodologies for greenhouse gas accounting to ensure rigour, consistency, and transparency, in line with evolving regulatory and investor expectations on climate disclosure.

Our emissions inventory is developed in accordance with the GHG Protocol Corporate Accounting and Reporting Standard and covers Scope 1, Scope 2, and selected material Scope 3 categories relevant to our logistics and warehousing operations. This comprehensive, standards-based approach enables us to accurately measure our carbon footprint, set informed reduction priorities, and track progress against our decarbonisation objectives.

GHG Emission Scopes Overview

Scope 1 – Direct Emissions

Scope 1 emissions represent greenhouse gases released directly from sources owned or controlled by Horizon. These are calculated based on the actual consumption of fuels and refrigerants across our facilities and operational activities.

Key Emission Sources Include

Diesel combustion from on-site operations and backup DG sets

Refrigerant use – R22, R134A, R410A, R32 and SF₆ in HVAC systems

Fire suppression systems across park facilities

Emission factors are sourced from IPCC and UK DEFRA 2025 (UK Department for Environment, Food & Rural Affairs) guidelines, to ensure consistency and international comparability.

Scope 2 – Indirect Emissions

Scope 2 emissions account for the indirect greenhouse gas emissions resulting from the consumption of purchased electricity across all Horizon locations.

A **location-based approach** has been adopted for quantification, applying the national grid emission factor published by the **Central Electricity Authority (CEA) Version 21, India**. This reflects the average carbon intensity of the electricity grid supplying our operational sites.

From Purchased Energy

Scope 3 – Other Indirect Emissions

Horizon recognises the importance of accounting for value chain emissions beyond its direct operational boundary. We report against the following Scope 3 categories relevant to our business activities.

Purchased Goods & Services

Capital Goods

Fuel & Energy-related Activities not included in Scope 1 or 2

Upstream Transportation & Distribution

Waste Generated in Operations

Business Travel

Employee Commuting

Downstream Leased Assets

Data Collection Methodologies Applied Across Scope 3 Categories

Data Monitoring

Average Spend-Based Method

Categories: 2, 1

Applied for Category 2 (Capital Goods) and the purchased-services component of Category 1 (Purchased Goods & Services), where activity data is derived from financial expenditure records.

Average Data Method

Categories: 1, 3, 5

Applied for the purchased-goods component of Category 1 (Purchased Goods & Services), Category 3 (Fuel- and Energy-related Activities) and Category 5 (Waste Generated in Operations), using activity-specific emission factors.

Distance-Based Method

Categories: 4, 7, 6

Category 4: Transportation of purchased materials.
Category 7: Covers employee commuting where distance data is available at the individual level.
Category 6: Individual-trip basis for both air and rail travel.

Asset Specific Method

Categories: 13

Applied for Category 13 (Downstream Leased Assets), where primary energy consumption – electricity, diesel, etc. from specific leased assets is considered.

Emission factors are drawn from a combination of globally recognised databases – Ecoinvent 3.10, Exiobase, IPCC AR6 GWP values and 2006 Guidelines methodology, IEA, India GHG Programme, and UK DEFRA 2025. They are selected based on category relevance and data availability. This ensures the highest possible accuracy in our Scope 3 disclosures.

A 4.5% reduction in Scope 1 emissions was achieved this year due to fewer power outages compared to the previous year.

Embodied Carbon Strategy

Development /Life Cycle Assessment

Horizon recognises that a truly comprehensive climate strategy must extend beyond operational emissions to fully capture embodied carbon embedded in every asset. This includes the carbon released during raw-material extraction, manufacturing, construction, maintenance, and end-of-life disposal of our industrial real-estate portfolio.

Aligning with GRESB's focus on asset life-cycle and materiality, Horizon has charted a clear, phased pathway to integrate Life-Cycle Assessment (LCA) into both development and asset-management practices.

Methodology

Using LCA modules, A1-A5 we quantified raw-material extraction, transport (tonne-km), manufacturing, and construction services with activity and spend-based emission factors from relevant databases.

Pilot Phase (FY 2024-25)

Scope

First structured Life-Cycle Assessment (LCA) on a select group of development projects.

Coverage

Material sourcing (cement, steel, glass, etc.) Construction activities and associated emissions

Operational energy use (HVAC, lighting, process equipment) De-commissioning and end-of-life disposal

Outcome

Quantified the complete environmental impact of the built environment, establishing a baseline for continual improvement.

Full-Scale Implementation (FY 2025-26 onwards)

Expansion

All new developments and major retrofit projects will undergo comprehensive embodied-carbon assessments.

Data Integrity

Emission factors sourced from Ecoinvent3.10, Exiobase, IPCC AR6, IEA, India GHG Programme, and UK DEFRA2025, ensuring global comparability.

Way Forward

Horizon will:

Optimise Material Use

Adopt low-carbon concrete (LC3 cement, fly-ash, GGBS, etc.), green or recycled steel, and low-carbon finishes, while tightening design to minimise mass.

Improve Logistics

Source regionally, consolidate deliveries, and optimise load planning.

Engage Suppliers

Encourage environmental product declarations (EPDs), embed carbon thresholds into procurement and reward low-carbon performance with a scorecard.

Strategic Embodied-Carbon Integration at Design

Integrate embodied-carbon criteria into every brief, add checkpoints, and align design, procurement, and construction.

High-emission sites will be prioritised for detailed material-selection studies, and material-specific roadmaps will be developed with explicit reduction targets, supported by a transition to activity-based reporting and continuous benchmarking.

These measures will lower embodied-carbon intensity in future developments, reinforce Horizon's Net Zero Road Map and sustainability agenda, and support the company's long-term environmental goals.

Net-Zero Roadmap

Climate Targets

Horizon's climate strategy is anchored by a comprehensive decarbonisation roadmap that targets net-zero emissions across Scope 1 and Scope 2 by 2050.

Rapid-track retrofits across the existing portfolio, bringing energy-efficient technologies to every asset, and rolling out IGBC Platinum certification for all new projects.

Scale-up of renewable capacity on-site solar, battery storage, and long-term power-purchase agreements that cut Scope 2 emissions to near-zero.

Continuous optimisation circularity, and Net-Zero finance, ensuring all portfolio assets meet or exceed the SBTi 1.5 °C pathway.

In FY 2025-26, we reported our full Scope 3 portfolio, strengthening the completeness of our emissions accounting, and began setting category-specific Net-Zero targets. By aligning every scope with SBTi's latest guidance, Horizon is not only meeting regulatory compliance but actively leading the sector towards a low-carbon, climate-resilient future.

Scope 1 and Scope 2 Emission Reduction Target 65% by FY2035. Scope 1 and Scope 2 Emission Reduction Target 90% by FY2050. We are developing our near- and long-term emission reduction targets (Net-Zero) aligned to the SBTi framework and the Paris Agreement.

Climate Strategy: Climate Risk Assessment

Horizon is embedding climate-risk and resilience measures across its portfolio to mitigate regulatory and energy-price volatility, accelerate the rollout of low-carbon, energy-efficient parks, and safeguard long-term value.

Physical Risk Assessment

Horizon has executed a comprehensive evaluation of the climate-related risks that could impact our industrial and logistics warehousing portfolio. We focused on the economic and financial losses that may arise from weather events and climate-driven phenomena, covering both immediate, event-driven impacts and long-term climatic shifts. The assessment quantified the full spectrum of potential harm including direct damage to assets, indirect disruptions to supply chains, and operational constraints arising from changes in water availability, sea-level rise and rising temperatures that could compromise employee safety and productivity.

To capture future uncertainty, Horizon performed a physical risk analysis using baseline conditions and two future climate scenarios under the Shared Socio-Economic Pathways (SSPs) framework—SSP 2-4.5 (medium-emissions) and SSP 5-8.5 (high-emissions). These scenarios, aligned with the IPCC Sixth Assessment Report, provide a range of plausible future climates that reflect different levels of societal progress and climate policy action. The analysis was carried out at the cluster level across our 15 assessment units, allowing us to pinpoint vulnerabilities in each geographic location.

The financial impact of both acute (extreme precipitations, floods, cyclones, earthquake, landslide, drought) and chronic (heat stress, water scarcity, sea-level rise) climate hazards has been quantified through a probabilistic loss framework. Resulting metrics asset damage (AD %), business interruption loss (BIL %) and average annual loss (AAL %) inform our risk-management and investment decisions. By translating physical exposures into tangible financial terms, Horizon can prioritise resilience measures, optimise capital allocation, and maintain portfolio resilience in the face of evolving climate risks.

Socio-Economic Vulnerability Assessment

To pre-emptively strengthen climate resilience, Horizon has implemented a geographically-explicit Socio-Economic Vulnerability Index (SEVI).

SEVI is a composite, data-driven tool that integrates biophysical, demographic, agrarian, economic, health-care and infrastructure indicators to quantify the degree to which each asset location is sensitive to climate change and its capacity to adapt. All datasets are geo-referenced, bias-corrected, normalised (min-max) and equally weighted, producing a single index value (0–1) that is then clustered into low, medium and high categories.

This framework enables Horizon to identify hotspots of socio-economic fragility, align adaptation investments with the greatest community risk, and report GRESB-required context-based asset-risk metrics that inform strategic resilience planning and disclosure.

Transition Risk Assessment

Horizon has executed a rigorous, TCFD-aligned Transition-Risk Assessment that systematically quantifies the exposure of each of its Grade-A industrial and logistics parks to Policy & Legal, Technology, Market, and Reputation risks across the three globally benchmarked climate pathways: Below 2°C, Delayed Transition and Current Policies.

Drawing on IPCC- and NGFS-defined temperature trajectories, the study integrates detailed regulatory mapping, a dual-axis Likelihood-Severity scoring framework, and an asset-level financial impact engine (CapEx, operating-costs, debt/service, and revenue) to generate granular, scenario-specific risk artefacts.

The outcome of portfolio-wide risk matrix and cluster-level exposure profiles empowers Horizon to prioritise short, medium, and long-term mitigation actions, align capital allocation with evolving policy regimes and green-finance criteria, and fully satisfy ESG disclosure mandates.

Acute Physical Risk Risk Assessment

Horizon is embedding climate-risk and resilience measures across its portfolio to mitigate regulatory and energy-price volatility, accelerate the rollout of low-carbon, energy-efficient parks, and safeguard long-term value.

● Operational Impact ● Social Impact ● Financial Impact

Risk Type	Risk Description	Impact on Business Strategy and Financial Planning
 Drought	A prolonged dry spell well triggers chronic water scarcity, severe soil desiccation and widespread ecosystem stress, jeopardizing park foundations, tenant water supply and surrounding habitats.	● Soil shrinkage can destabilise foundations and damage plumbing systems. ● Reduced water availability elevates health risks for tenants and simultaneously heightens tensions within the surrounding local communities. ● OPEX rises as water must be sourced from external tankers or treated on-site.
 Extreme Precipitation	Projected rapid, high-volume rainfall is expected to intensify at our park sites (Delhi, Pune, Nashik, Ahmedabad, Mumbai, Bengaluru, Chennai, Hyderabad), producing flash-flood conditions that exceed existing storm-water capacity.	● Excessive rainfall will overload on-site storm-water systems damaging warehouses, disrupt utilities, and halt tenant activity until drainage is restored. ● Tenant safety and productivity are compromised; surrounding communities may face increased flood risk and transit disruptions that impair access to local services. ● Capital and operating expenses rise while revenue falls.
 Flood	Parks on low-lying or saturated soils may retain surface water once drainage capacity is exceeded, inundating warehouses, docks, access roads and damaging pedestrian/service corridors that link tenants to external transport nodes.	● Water intrusion into parks, loading spalls, foundational settlement. Inventory & logistics staggering, leading to parks hand-over delays. ● Tenant relocations may ensue, causing local displacement and heightened concerns about site safety. ● Repair & asset hardening costs (CapEx). Re-valuation of disturbed sites, lower rental income. Increased OpEx for water-damage mitigation.
 Cyclone	A cyclone delivers high winds, heavy rain, hail (and sometimes storm surge), leading to structural failures and acute hazards for tenant and nearby communities.	● High-wind and rain damage to roofs, facades, and structural elements. Disruption of electricity, water and pedestrian movement. ● Community infrastructure (roads, hospitals) impacted, affecting tenant & employee commute. ● CapEx for wind-resistant retrofits, redundancies. Higher insurance premiums; potential loss of tenant revenue during outages.
 Earthquake	Seismic shaking from tectonic zones can settle foundations, fail structural elements, and collapse reinforced concrete or steel frames.	● Structural failure of foundations, beams, and utility conduits. Rapid shutdown of operations until safety inspections. ● Injuries among occupier and nearby local communities. Psychological stress in the workforce and local community. ● CapEx for seismic re-design/retrofit. Long-term loss of rental income if tenants abandon facilities. Elevated insurance & re-insurance costs.
 Landslide	Rapid downslope movement of saturated or unstable earth triggered by heavy rain, seismic activity or slope disturbance obstructs roads, damages parks, and poses life-saving hazards.	● Obstruction of access roads and critical pathways. Damage to parks and underground utilities. ● Evacuation risk for tenants; displacement of neighbouring communities and businesses. ● CapEx for slope stabilisation and drainage control. OpEx for emergency repairs and maintenance. Potential re-valuation of affected assets and insurance claims.

Chronic Physical Risk

Risk Assessment

● Operational Impact ● Social Impact ● Financial Impact

Risk Type	Risk Description	Impact on Business Strategy and Financial Planning
 Heat Stress	RCP 8.5 will trigger steadily higher temperatures and more heat-waves across Bengaluru, Hyderabad, Delhi, Nashik and Chennai, pushing HVAC and cladding beyond design limits, raising indoor-energy consumption for tenants and accelerating material degradation.	● Rapidly rising temperatures increase strain on HVAC, power supplies, and necessitating enhanced construction- and site-safety protocols that extend to tenant operations. ● Tenant risk heat-related illnesses, absenteeism; surrounding communities experience higher heat-wave exposure, leading to reduced quality of life and health strain. ● Rising OpEx for electrical & cooling; CapEx for smart cooling/insulation; possible lease-adjustments if tenant productivity drops.
 Water Stress	Forecasts of marked declines in surface and groundwater in Pune, Chennai, Bengaluru, Delhi and Hyderabad, driven by higher evapotranspiration, seasonal droughts and industrial demand; tightening effluent rules will also push parks to invest more in wastewater reuse, further stressing water budgets.	● Tenants may need external water trucking, increased water-monitoring, or retrofit of water-efficient systems. ● Tenant staff confront unreliable water supply (affecting health and work). Nearby communities suffer water scarcity, pressure on local resources and heightened social tension. ● Higher OpEx for external water procurement or treatment; potential CapEx for on-site water-harvesting or desalination; volatility in lease income if tenants vacate.
 Sea-level Rise	Rising sea level and heightened storm surges will increase flood frequency and depth around high-density coastal parks, while a rising water table will drive salt-water intrusion, threatening foundations and utility pipelines.	● Elevated flood frequency → higher maintenance, water-tightening, potential shutdowns of waterfront tenants; reduced operational efficiency due to storm-water management. ● Tenants, staff, and nearby local communities face heightened flood threats, displacement, and growing distrust in site safety. ● Low-to-moderate CapEx for flood-proofing and drainage; contingency reserves for potential asset re-valuation; insurance premium increases.

Transition Risk

Risk Assessment

● Operational Impact ● Social Impact ● Financial Impact

Risk Type	Description	Impact on Business Strategy and Financial Planning
 Policy and Legal Risk	Policy and legal risk from fast-tightening Indian climate, ESG, and environmental regulations (CCTS, ECBC, PAT/RCO, EIA, BRSR, InvIT norms) increases Horizon's compliance, reporting, and retrofit obligations, exposes it and its tenants to carbon and environmental liabilities, and makes green certifications effectively essential for maintaining approvals, incentives, tenant demand, and asset value.	● National net-zero targets can impose specific real-estate actions, driving higher OpEx and CapEx. ● Emerging carbon pricing introduces a new cost layer to consider. ● Elevated costs, legal rulings, and potential penalties can erode demand and shrink margins. ● Evolving ESG disclosure and assurance mandates continually drive-up compliance expenses. ● Rising carbon-price floors will turn a growing portion of operating costs into mandatory allowance payments. ● Grid tariff hikes, driven by upstream compliance, will continually raise energy expenses and squeeze margins. ● A phased decarbonisation programme (solar, retrofits, REC procurement) is necessary; unavoidable post-2030 retrofits may trigger asset write-offs.

● Operational Impact ● Social Impact ● Financial Impact

Risk Type	Description	Impact on Business Strategy and Financial Planning
 Technology Risk	Horizons' technology risk stems from increasing mandates for low-carbon and energy-efficient operations, solar, EV charging and digital infrastructure. High upfront CapEx and the risk of delayed adoption can place Horizon at a relative disadvantage, allowing competitors to attract tenants and awards. This scenario may lead to costly retrofits, regulatory sanctions, and diminished asset value for Horizon.	● Substantial upfront investment is required to deploy solar photovoltaics, battery storage, and energy-efficiency upgrades. ● Conventional HVAC, generators and other fossil-fuel-based infrastructure will face accelerated depreciation and de-commissioning, creating write-offs. ● Rising petroleum costs are forcing the entire logistics chain from upstream production to downstream distribution to pivot rapidly to electric-vehicle fleets. ● Data security and privacy risks encompass unauthorised access to tenant and ESG data, regulatory penalties for non-compliance, reputational damage, operational disruptions from compromised systems, and costly remediation and brand-recovery efforts. ● Low-carbon assets (solar, LEDs, EV charging, batteries, smart metering) drive a big CapEx peak from 2025-2040. Postponing it until after 2030 crowds the spend into one short period, increasing total costs. ● Grid-centric infrastructure may require premature replacement; the risk is higher in a delayed-transition scenario where retrofit costs can exceed residual value. ● Training, maintenance, integration and insurance costs continue to rise with each new technology cycle, scaling with portfolio size under all scenarios.
 Market Risk	Market risk for Horizon rises as green-finance regulations tighten and tenant ESG requirements intensify; without timely low-carbon upgrades, financing costs climb, valuations deteriorate, and lease revenues decline.	● Escalating input costs energy and water combined with increasingly rigorous output mandates, such as waste-treatment standards, magnify operational pressure on the portfolio. ● The market's appetite for commercially certified green-building spaces is surging at an accelerating rate, reshaping tenant expectations and competitive dynamics. ● A weak green-asset brand forces to access only conventional debt and equity at higher spreads, expanding the weighted-average cost of capital and tightening liquidity for park development and refinancing. ● Investors' ESG-screening imposes a structural discount on Horizon's assets, lowering valuation multiples and reducing the net-equity contribution of its InvIT structure.
 Reputation Risk	Reputation risk for Horizon rises if its green-building claims lag, green-washing or community concerns can trigger media backlash, higher financing costs, tenant attrition, and stalled approvals, eroding valuation and investor confidence.	● Failure to meet ESG disclosure expectations undermines investor, tenant, and community trust, jeopardising future capital appeals and lease agreements. ● A diminished confidence base drives up borrowing costs, tightening credit terms, and compressing valuation multiples. ● Tenant withdrawals weaken community trust, employee morale, investor confidence, and overall reputation, tightening Horizon's access to finance and premium occupants. ● ESG-driven stakeholders might mobilise protests and pursue legal action, amplifying reputational harm. ● A weak green-asset brand forces Horizons' to borrow at higher rates and under less favourable equity terms, pushing up the weighted-average cost of capital and curbing the net-income contribution of its InvIT structure. ● The shift towards certified parks erodes Horizons' lease-rate premium and sidelines it from high-value MNC and government procurement, shrinking EBITDA and dampening valuation multiples.

Adaption and Mitigation Measure

Physical Climate Risk Assessment

Our climate-risk assessment uncovered the vulnerabilities and prospective impacts of climate change across Horizon's industrial and logistics warehousing portfolio and its supply-chain network. Drawing directly on those insights, we have formulated a targeted adaptation and mitigation programme that embeds climate-resilience into every aspect of our operations - from asset-level upgrades and ESG disclosure to tenant collaboration and capital-market strategy. This roadmap is now fully integrated into Horizon's core business strategy, ensuring that we not only meet evolving regulatory and market expectations but also safeguard asset value, protect our tenants, and sustain long-term growth.

Risk Type	Mitigation Measure
 Drought	• Install water-efficient fixtures and appliances. • Replace high-water-use landscaping with xeriscaping or native, drought-tolerant plants. • Use of harvested rainwater or recycled greywater for irrigation. • Use rainwater harvesting recharge pits and ponds to enhance ground water table in the region.
 Earthquake	• Seismically design structures (foundations, walls, connections) and retrofits for acquired assets. • Brace non-structural elements (insulation and heavy equipment, etc). • Install base isolation or damping systems to absorb seismic energy. • Upgrade to flexible gas and water utility connections. Apply shatter-resistant film to windows and skylight panel.
 Cyclone	• Reinforce roofs with hurricane straps and high-wind-rated materials. • Install impact-resistant windows, doors, and storm shutters. • Install wind-lock systems and heavy-duty structural guides for rolling steel doors. • Maintain trees and landscaping to reduce airborne debris. • Securely anchor rooftop equipment and exterior signage.
 Extreme Precipitation	• Install flood-proofing (sump pumps, backwater valves) and elevate critical utilities. • Upgrade roofing and drainage to handle heavy rain and divert water from foundations. • Use green infrastructure (permeable pavements, rain gardens) for onsite stormwater management. • Use flood-resistant materials in vulnerable lower parks levels.

Risk Type	Mitigation Measure
 Flood	• Elevate plinth and critical equipment above projected flood levels. • Install permanent or deployable flood barriers around the property. • Retrofit lower levels with flood-resilient materials (concrete, waterproof insulation, tile). • Improve site drainage (permeable pavements, bioswales, retention ponds). • Use wet floodproofing in non-critical areas to allow controlled water entry and exit.
 Heat Stress	• Install and maintain high-efficiency thermal insulation to support indoor cooling. • Improve the building envelope with cool roofs and enhanced insulation to reduce heat gain. • Add permanent shade structures over outdoor work areas, walkways, and entrances.
 Landslide	• Conduct geotechnical surveys and slope stability analyses to identify high-risk areas. • Build stabilisation structures (retaining walls, terracing, rock buttresses). • Install and maintain surface and subsurface drainage to prevent soil saturation. • Re-grade slopes and use bio-engineering (deep-rooted native vegetation).
 Water Stress	• Retrofit properties with low-flow fixtures and water-efficient appliances. • Replace traditional landscaping with xeriscaping using drought-tolerant native plants. • Install rainwater harvesting and greywater systems for non-potable uses. • Use smart irrigation with weather and soil moisture sensors. Install sub-metering and leak detection to monitor and manage water use.

Transition Risk Assessment

Horizon climate-adaptation framework is structured around a phased, risk-responsive plan that aligns capital allocation, ESG disclosure, and tenant engagement with the evolving regulatory, market, and technology landscape. By deploying short-term capital-efficiency measures, medium-term data-automation, and collaborative co-investment, and long-term net-zero operations, the Horizon will safeguard its operating margin, sustain premium valuations, and maintain its leadership in Indian industrial and logistics real estate while meeting global sustainability expectations.

Risk Type	Mitigation Measure
 Policy and Legal	• Create a centralised compliance playbook (consent renewals, audit logs, incident reporting) digitised for every asset. • Implement a proactive compliance monitoring system that tracks regulatory updates, conducts regular risk and executes timely remediation to keep all assets fully compliant with emerging environmental and other regulatory requirement. • Evaluating a portfolio-wide carbon management function that embeds allowance/REC procurement and lifecycle carbon gates.
 Technology	• Deploy IoT-based energy, water, waste & emissions data management; digitalized ESG & Asset performance dashboards. • Execute a brown-to-green conversion programme (cool roofs, LED, efficient HVAC & MEP, EV charging) on assets. • Transition all sites to renewable self-sufficiency (solar + storage) and offer this as a tenant-energy service.

Risk Type	Mitigation Measure
 Market	• Embed green-lease clauses into every lease agreement. • Implement co-investment structures with anchor tenants and launch tenant-sustainability scorecards. • Keep certification depth (IGBC/ EDGE /LEED/ISO/GRESB) high.
 Reputation	• Publish a single, auditable ESG evidence repository; third party assured data, voluntary compliance BRSR Core and GRESB. • Engage in standard-setting bodies (BIS, MoEFCC, MNRE MOHUA, DPIIT, CPCB/ SPCB, SEBI) and lead industry-wide resilience benchmarks. • Consistently report asset-level performance (energy intensity, emissions, resilience metrics).

Green Building

Horizon embeds green-building principles at every stage of its development lifecycle. Every asset is conceived, constructed, and operated to maximise environmental stewardship, occupant well-being, and long-term resource efficiency.

Our commitment receives formal, independent validation through IGBC Platinum certification – the gold standard for sustainable buildings in India. IGBC assessment spans four pillars – energy efficiency, water conservation, waste reduction, and indoor environmental quality – ensuring that every Horizon property delivers the highest level of sustainable performance.

Platinum certification requires excellence across multiple sustainability parameters, including:

Site Planning

- Strategic location with minimal ecological disruption
- Efficient transport modal mix and optimised vehicular routing

Energy Efficiency

- Energy-efficient lighting
- Efficient HVAC systems and energy management
- Installation of on-site RE plants (Solar)

Water Conservation

- Rainwater harvesting, greywater recycling
- Low-flow water fixtures
- Reduce potable water use by 30-40%

Biodiversity and Landscaping

- Preserve or restore native vegetation
- Green cover planning and habitat support

Indoor Environment and Occupant Health

- Ample natural daylight, enhanced ventilation
- Indoor air quality monitoring
- Use of non-toxic materials and biophilic elements

Materials and Waste Management

- Use of low-carbon and recycled materials
- Construction waste diversion

Transport and Site Operations

- Electric vehicles for material handling and dock areas
- Infrastructure for EV charging, service vehicle parking

All Horizon parks that meet or exceed the above parameters have been granted IGBC Platinum certification, confirming world-class performance across energy, water, waste, indoor environment, and biodiversity. This independent validation underpins Horizon's reputation as the preferred partner for ESG-conscious, low-carbon industrial parks development.

Water Conservation

Low-flow and Smart Metering GRI 303

At Horizon, we recognise that responsible water management is critical to environmental stewardship and operational resilience. Across our parks, we have implemented water conservation measures, including low-flow fixtures, water metering systems, preventive maintenance, and optimised plumbing. These measures reduce potable water consumption and improve efficiency. During construction, water-saving curing compounds were used to minimise water use. These initiatives enhanced water conservation performance, strengthened resource management, and improved operational efficiency across the portfolio.

0.05

KL/sq.ft is the water intensity

(Intensity calculation is based on active assets area)

Grey-Water Recycling and Reuse GRI 303

Horizon is well aware of the significance of conserving freshwater resources and strengthening long-term water security. To reduce dependence on freshwater, we have implemented greywater recycling systems across all parks, treating wastewater from non-sewage sources for reuse in landscape irrigation, toilet flushing, and utility operations. Supported by regular monitoring and maintenance, this initiative reduced freshwater consumption, minimised wastewater discharge, and reinforced sustainable water management.

STP Optimisation GRI 303

Case Study

Optimising Performance and Efficiency of the 300-KLD Sewage Treatment Plant

To improve the efficiency of the STP systems, Horizon implemented a comprehensive plan which included:

- Real-time tracking of critical parameters such as flow rate, biological/organic loading, and effluent stability to prevent hydraulic overloading and operational stress under variable inflow conditions.
- Real-time data coverage on various stages of the treatment process by integrating upgraded Moving Bed Biofilm Reactor (MBBR) technology with existing collection, tertiary treatment, and reuse systems to maximize microbial growth and treatment efficiency.

Rainwater Harvesting GRI 303

At Horizon, we promote responsible water stewardship through rainwater harvesting systems. These are implemented across 18 parks, with 430 rainwater harvesting pits installed to capture stormwater runoff and support groundwater recharge. Integrated drainage and filtration systems enhance water percolation, reduce flooding and soil erosion risks, and improve stormwater management. These initiatives strengthen water security, reduce dependence on external water sources, and support long-term environmental resilience and climate adaptation. The project aligns with the parks' broader sustainability objectives. Moreover, it demonstrates Horizon's commitment to resource efficiency, environmental protection, and long-term climate adaptation.

430 rainwater harvesting

rainwater harvesting

Case Study

Enhancing Water Stewardship Through Rainwater Harvesting

At its Patancheru facility, Horizon significantly enhanced water resilience by expanding its rainwater harvesting infrastructure from

2 → 9
recharge pits

This strategic intervention increased the site's groundwater recharge potential to an estimated

15.3 lakh
litres annually, transforming seasonal rainfall into a reliable water resource.

Beyond replenishing groundwater, the initiative reduced surface runoff and waterlogging risks while lowering dependence on external water sources. By strengthening local water security and supporting environmental compliance, the project delivers lasting value to both the industrial park and the surrounding community.

Waste Management

Waste Management and Zero Waste Operations GRI 306

At Horizon, waste management is a key element of our sustainability framework. It ensures responsible handling and full regulatory compliance. We achieve 99% waste segregation at source and diversion from landfill through reduction-focused practices. All waste is disposed of via authorised vendors, ensuring safe, traceable, and environmentally compliant management.

50.55
tonnes of total
waste generated

0.28

waste generated

50.27
tonnes of non-hazardous
waste generated

99%
recycled waste

Compost Pit

Horizon implemented composting initiatives across 18 operational parks to manage biodegradable waste sustainably and reduce landfill disposal through on-site compost pits. Effective waste segregation enabled conversion of organic waste into nutrient-rich compost. This compost is reused for landscaping. This approach supports circular resource use and soil health.

These initiatives reduced landfill waste and emissions while enhancing sustainable horticulture and overall environmental performance.

Horizon promotes circular resource management through on-site composting of organic waste. During FY 2025–26, the organisation composted 100% of landscape waste through compost pit. This reduced waste sent to disposal facilities and at the same time, generated valuable organic compost for landscaping.

Biodiversity and Nature Positive Features

Horizon integrated biodiversity and nature-positive features across all parks to enhance ecological resilience, strengthen wildlife habitats, and promote sustainable landscape development. Initiatives included the development of urban forests, cascade ponds, rainwater harvesting ponds, swale drains, and deciduous tree plantations to improve green cover, water retention, stormwater management, and local micro-climate conditions.

Horizon continues to enhance biodiversity and environmental quality across its assets through the development and maintenance of green spaces. 78 number of native species were planted in this area.

78

23

no. of ponds

1,66,411

trees planted across
our operational
locations

During FY 2025–26, we planted 1,66,411 trees across our operational locations, strengthening biodiversity, enhancing green cover, and contributing to ecosystem conservation and climate resilience.

Specialised gardens such as butterfly, spice, fruit, and herb gardens were established to support pollinators, enrich biodiversity, and improve ecological health, while artificial nests were installed within urban forests to provide safe habitats for birds and small fauna. Regular monitoring and maintenance activities were also conducted to ensure the long-term sustainability and effectiveness of biodiversity features.

These initiatives enhanced ecological diversity, improved habitat availability, and strengthened water conservation and soil protection measures. They also increased carbon sequestration and created resilient green spaces that support long-term environmental sustainability and nature-positive development across the parks.

05

Governance

At Horizon, strong governance forms the foundation of our journey towards delivering 'The Promise of More'. By embedding sustainability into decision-making and proactively managing emerging risks, our governance framework supports long-term value creation for all stakeholders.

Board Composition

Leadership

At Horizon, the highest governance body is the Board of Directors, which holds ultimate accountability for the organisation's strategy, ESG oversight, and risk management. The Managing Director and Chief Executive Officer reports directly to the Board and is responsible for integrating sustainability considerations into key business decisions and operations.

To further strengthen corporate governance, accountability, and transparency, Horizon has adopted and disclosed a Policy for Evaluation of the Performance of the Board of Directors. This policy provides a structured framework for assessing the effectiveness of the Board and its members on a periodic basis.

Horizon has disclosed both the Succession Planning Policy and Nomination & Remuneration Policy as part of its governance framework for FY 2025-26. We have also disclosed a Code of Conduct for the Board of Directors and Senior Management Personnel to strengthen ethical business practices, corporate governance, regulatory compliance, integrity, confidentiality, conflict of interest management, insider trading prevention, and responsible decision-making across operations.

Board-level Committees

Five Board-level committees provide structured oversight of risk, audit, and sustainability.

Leadership

Committee	Chair	Key Mandate	ESG Oversight Role
 Risk Management Committee	Independent Director	Identifies, assesses, and mitigates operational and strategic risks; reviews risk exposure regularly.	ESG risk identification and mitigation oversight
 Audit Committee	Independent Director	Oversees financial reporting integrity, internal controls, compliance, and external auditor independence.	Sustainability data assurance interface
 CSR & Sustainability Committee	Independent Director	Guides CSR and sustainability initiatives and ensures alignment with ESG goals, environmental stewardship, and community development.	Primary ESG programme oversight
 Nomination and Remuneration Committee	Independent Director	Oversees Board composition and diversity, leadership appointments, and the Remuneration Policy for Directors, key managerial personnel, and senior management, in line with applicable laws and regulations.	Supports the integration of ESG considerations into senior decision-making
 Stakeholder's Relationship Committee	Independent Director	Oversees fair and timely resolution of shareholder and investor issues, strengthening stakeholder rights and governance performance as part of Horizon's ESG commitments.	Strengthens Horizon's social and governance performance within its overall ESG framework

Leadership-level Committees

Leadership

Two leadership-level committees ensure the integration of sustainable practices into key business functions.

Committee	Members	Mandate
 ESG Steering Committee	Heads of Strategy & Investment, Marketing, Operations, Human Resources, Projects & Development	Oversees ESG strategy and performance; embeds ESG into core business practices; monitors progress against sustainability targets.
 POSH Committee	As per statutory requirement under POSH Act 2013	Ensures a safe, inclusive workplace with an Internal Complaints Committee that includes an independent external member, offering confidential, structured grievance handling, protecting against retaliation, and safeguarding employee dignity.

ESG Governance Leadership

Horizon has established a structured ESG governance framework that guides its sustainability journey across all parks and operations, translating priorities into action, reinforcing accountability, supporting regulatory compliance and risk management, and embedding ESG considerations throughout the organisation.

Together, We Build a Sustainable Future

Strategy to Action

Turning ESG priorities into meaningful impact

Monitor to Improve

Tracking performance and driving continuous improvement

Engage to Advance

Empowering people and partners to create lasting value

ESG Governance Structure

  Leadership

At Horizon, our ESG governance flows from the highest level of leadership to ensure absolute strategic alignment and accountability. Our Managing Director and Chief Executive Officer maintains oversight of our sustainability journey, reporting progress and risks directly to the Board of Directors.

To drive these initiatives deeply into our everyday business, a dedicated team of senior executives reports directly to the MD & CEO. This direct line of command bridges top-level strategy with daily on-ground operations across all parks. By structuring our leadership this way, we ensure that every sustainability target is backed by clear ownership and execution. Ultimately, this reporting chain guarantees that ESG considerations are championed by our topmost decision-makers

ESG Policy

ESG Policy Overview

Horizon's ESG Policy is a multi-faceted framework applicable to the entire value chain. It includes tenants, contractors, service providers, and supply chain partners. The policy is aligned with globally recognised standards: NGRBC, UN SDGs, UDHR, and UNGC Ten Principles.

The ESG Strategy is anchored on three principal pillars:

- Resource Conservation and Operational Efficiency
- Employee and Community Engagement
- Ethical and Responsible Business Practices

These pillars form the foundation of Horizon's ESG Strategy, guiding our efforts to create sustainable, responsible, and resilient business operations.

Our Key Focus Areas

Carbon Emission Reduction & Energy Optimisation

Reduce GHG emissions across park operations through energy efficiency and renewable energy adoption

Workplace Health, Safety & Well-being

Maintain ISO 45001-aligned OHS systems across all parks and sites

Sustainable Warehousing Infrastructure Development

Design future-ready, resilient facilities aligned with IGBC Platinum standards

Ethical Conduct, Compliance & Human Rights

Zero tolerance for bribery; uphold human rights and anti-corruption standards

Employee Development, Welfare & Capability Building

Upskill employees, ensure welfare benefits, promote learning culture

Operational Efficiency & Asset Performance Management

Optimise resource utilisation and asset performance across portfolio

Community & Tenant Engagement

Drive inclusive, sustainable growth through meaningful stakeholder partnerships

Responsible Procurement & Supplier Partnerships

ESG-led supplier evaluation, screening, and continuous improvement

Responsible Public Policy Engagement

Engaging policymakers, promoting fair competition and human rights, and advancing aligned policy

Stakeholder Grievance and Whistleblower Mechanism

A fair, confidential channel for concerns without fear of retaliation, with impartial, timely resolution and corrective action

ESG-linked Compensation

Leadership - ESG in Compensation

Horizon has embedded ESG objectives into the KRAs and annual performance reviews of senior leadership and other employees for FY 2025-26, with ESG KPIs directly linked to variable compensation. Progress is assessed through our formal performance management framework, ensuring accountability, incentivising sustainable value creation, and aligning our sustainability strategy with long-term business success.

Integrated Management System (IMS)

GRI 2-23

GRI 2-24

GRESB: Policies & Certifications

At Horizon, operational excellence is guided by a comprehensive Integrated Management System (IMS). It brings structure and consistency to every level of the organisation. By seamlessly integrating four internationally recognised ISO standards, the IMS enables cross-functional accountability, strengthens regulatory compliance, and fosters a culture of continuous improvement.

Horizon maintained IMS certification across its development and operational parks.

ISO 9001 strengthens our focus on quality management and customer satisfaction. This certification helps us optimise processes, standardise service delivery, and drive continuous improvement to consistently meet and exceed stakeholder expectations.

ISO 45001 underpins our commitment to providing a safe, healthy, and secure work environment. It enables us to proactively identify occupational health and safety risks, implement effective controls, and safeguard the well-being of our employees, contractors, and all stakeholders associated with our operations.

ISO 14001 ensures that our environmental management practices are structured, proactive, and aligned with our sustainability objectives. It enables us to systematically identify, manage, and reduce the environmental impacts of our operations while ensuring compliance with applicable regulations and continuously enhancing our environmental performance.

ISO 27001 reinforces our information security governance by establishing a systematic approach to managing sensitive company, client, and operational data. It ensures the confidentiality, integrity, and availability of information assets while reducing vulnerabilities and protecting against potential threats.

Ethical Business Practices

GRI 2-15 GRI 2-16 GRI 205: Anti-Corruption

Code of Conduct

At Horizon, the Code of Conduct guides employees, Senior Management, and stakeholders, defining the standards of behaviour expected across all interactions and decisions. It forms the foundation of our ethical business practices and reinforces integrity across the organisation.

Horizon maintains a comprehensive Code of Conduct covering conflicts of interest, anti-corruption, asset protection, political contributions, whistleblower protection, and ethical business practices. During FY 2025–26, 100% of employees and Board members received Code of Conduct training, reinforcing a culture of integrity, accountability, and compliance.

Anti-Corruption Policy GRI 205-1 GRESB

Horizon's Anti-Corruption Policy reinforces our zero-tolerance stance on bribery, corruption, and unethical influence across all operations. The policy clearly prohibits any form of improper payment or advantage. It applies to directors, employees, and business partners, and is communicated to all relevant third parties. Our people receive regular training to ensure awareness of applicable legal requirements and internal standards.

The policy promotes transparency, accountability, and integrity in all business dealings, establishes clear reporting and investigation procedures for suspected violations, and mandates corrective and disciplinary actions where breaches occur. Through these measures, Horizon strengthens regulatory compliance and embeds ethical conduct into everyday decision-making.

Whistleblower Mechanism GRI 2-26 GRI 2-25 GRESB Policies

We, at Horizon, maintain a zero-tolerance approach to unethical conduct. We established a Whistleblower Protection and Reporting Mechanism to uphold the highest standards of business ethics, integrity, and responsible corporate governance across its operations. The framework provides employees, contractors, suppliers, tenants, partners, and other stakeholders with a secure and confidential platform to report concerns. These concerns are related to unethical conduct, ESG violations, policy non-compliance, fraud, corruption, cybersecurity, data privacy breaches, and other misconducts.

Concerns can be raised through the Horizon ESG Portal or designated reporting channels, with provisions for anonymous reporting and strict confidentiality safeguards. The mechanism ensures fair and independent investigation of all complaints.

At the same time, it protects whistleblowers against retaliation, victimisation, intimidation, or discrimination for reporting concerns in good faith.

Grievance Redressal GRI 2-25

At Horizon, we foster a safe and inclusive environment through a structured grievance redressal mechanism. It enables employees, partners, and stakeholders to raise concerns related to workplace, environmental, social, and governance matters. Accessible through multiple channels, the mechanism ensures timely resolution, confidentiality, whistleblower protection, and non-retaliation.

Grievances are centrally tracked and managed through a defined multi-level governance and escalation process with clear resolution timelines. Regular monitoring and review of complaints and corrective actions strengthen accountability, transparency, and stakeholder trust across our operations.

Cyber Security & Data Privacy

418-Customer Privacy

Data Privacy

Horizon maintains a comprehensive cybersecurity and data privacy framework, guided by its Cybersecurity Policy and supported by ISO 27001 certification, a Disaster Recovery Plan, and ongoing awareness programmes. This framework covers information security, IT asset management, data privacy, incident response, and periodic policy reviews.

In FY 2025-26, Horizon reported zero critical data security breaches and zero data privacy complaints, maintained 99.9% system uptime, and achieved 100% cybersecurity training coverage for its workforce.

We continue to strengthen our controls, monitoring mechanisms, and data protection protocols to safeguard customer and business information, uphold confidentiality and privacy, and enhance preparedness for evolving regulations, including progressing towards compliance with the Digital Personal Data Protection (DPDP) Act, 2023.

Responsible Procurement Practices

308-1, 414-1

Supply Chain Engagement

Horizon follows a responsible procurement approach. It is supported by supplier screening, ESG requirements, ethical sourcing standards, and compliance monitoring.

Horizon promotes responsible procurement through a Supplier Code of Conduct that incorporates ESG, labour, ethical, and environmental requirements. Suppliers are screened through risk assessments, performance reviews, and compliance checks, with corrective actions implemented where necessary.

The organisation also engages suppliers through ESG risk monitoring and capacity-building initiatives to drive continuous improvement across its value chain.

The organisation supports responsible sourcing by prioritising local suppliers where feasible, maintaining transparent payment practices, and promoting equal procurement opportunities based on quality and compliance standards.

To strengthen supply chain sustainability, Horizon maintains traceability mechanisms through supplier documentation and contractual disclosures, while adopting a zero-tolerance approach towards child labour and forced labour.

Fair Competition

206-1

Policies

Horizon is committed to ethical business conduct, fair competition, and regulatory compliance, supported by robust governance and compliance mechanisms. These practices promote transparency, accountability, and responsible decision-making while strengthening stakeholder trust across the value chain.

Risk Management Framework

ESG Risk & Climate Risk Assessment GRESB Risk Assessment

Horizon employs a structured risk matrix that documents process, activity, risk, control and operating frequency across environmental, social, governance, operational, and information-security domains including energy, water, waste, compliance, OHS, cybersecurity and supply-chain risks via defined assessments, periodic reviews, and clear ownership.

In FY 2025-26 we completed an ESG assessment of physical and transition climate risks using recognised scenarios, embedding these risks into our tested business-continuity framework to bolster resilience. Horizon will further formalise this approach, moving toward a fully integrated enterprise risk-management system.

Green Lease Framework

Green lease provisions have been integrated into tenant agreements to foster collaboration on environmental performance and advance sustainability across leased spaces. The framework promotes resource efficiency, waste reduction, responsible consumption, and the use of sustainable materials, while supporting improved indoor environmental quality and sustainable operational practices.

The framework encourages energy and water efficiency, waste reduction, responsible consumption, and the use of sustainable materials, while supporting improved indoor environmental quality in tenant spaces.

Green lease provisions are currently adopted across 65% of Horizon's parks, supporting greater tenant engagement, improved resource efficiency, and reduced environmental impacts. Horizon is committed to integrating green lease provisions into all new lease agreements, with the objective of achieving 100% adoption for future leases.

06

Social

At Horizon, our people are at the core of sustainable growth. We are committed to fostering an inclusive, safe, and engaging workplace, where our employees are empowered to contribute meaningfully and grow professionally. While we continue to strengthen our human capital, we also make an effort to create a positive social impact. Our aim is to grow as a resilient, people-centric organisation that delivers long-term value and sustainable growth.

Diversity, Equity & Inclusion

**Leadership and
DEI Governance**

At Horizon, an equitable and inclusive workplace is not just an aspiration, but a fundamental principle. We are committed to ensuring that every individual, regardless of gender, age, background, or identity, has an equal opportunity to grow, contribute, and thrive. Here, the workforce comprises employees across different age groups, contributing to a diverse and balanced talent pool.

Age Diversity

Our workforce is predominantly composed of experienced professionals in the 30-50 age bracket.

Horizon had a total workforce of 137 employees during the reporting period. Of these, 112 employees (81.8%) were male and 25 employees (18.2%) were female, reflecting the gender composition of the workforce.

Women in Leadership

This demonstrates our approach towards enhancing gender diversity in leadership. Through our continued focus on diversity, equity, and inclusion, Horizon seeks to cultivate a workplace where individuals feel valued, respected, and empowered to achieve their full potential.

Equal Opportunity

At Horizon, inclusion begins from the very first interaction and continues throughout an employee's journey with the organisation. From recruitment and onboarding to career development and leadership progression – equal opportunity is embedded into every stage of an employee's growth.

The organisation is guided by anti-discrimination policies, transparent practices, and employee-led initiatives. We strive to create a workplace culture where diverse perspectives are valued and empowered to contribute.

Inclusive Workplace

Our commitment to inclusivity comes to life through a range of engagement activities that celebrate diversity. We bring employees together in collaborative events. Their participation helps mutual understanding, cultural appreciation, and a sense of belonging.

During the year, we organised a DEI Cross-Gender Team Cooking activity, where employees from different functions and backgrounds prepared unique dish with limited resources. These sessions encouraged open dialogue, mutual understanding, and cultural appreciation, while breaking down stereotypes and traditional gender roles. By creating informal, shared experiences, we foster trust, strengthen cross-functional relationships, and cultivate a genuine sense of belonging among employees.

These efforts contribute to a vibrant, inclusive workplace where every individual feels respected, heard, and is able to contribute to sustainable organisational growth.

Commitment to Pay Equity and Fairness

Horizon's Board approved Nomination and Remuneration Policy establishes a fair, transparent, and competitive framework. Total remuneration fixed pay based on role, grade, market benchmarks and performance; variable pay tied to company results; and benefits and perquisites ensures equal compensation across gender, race and ethnicity. Rigorous benchmarking, balanced hiring, performance-driven rewards, and annual reviews eliminate discrimination, while ongoing pay-gap analysis corrects any unjustified disparities.

Employee Well-being

Employee Well-being

At Horizon, employee well-being is perceived as a foundation for both individual welfare and organisational success. We strongly believe that people thrive when they are supported in every aspect of their lives. In light of this, the organisation adopts a holistic approach to health that extends far beyond physical safety. Equal importance is given to mental, emotional, and social well-being through structured initiatives. This ensures that employees feel supported both professionally and personally.

During the reporting period, a diverse range of well-being programmes were organised for the workforce:

Nutrition and healthy lifestyle workshops to promote long-term preventive healthcare

Ergonomic guidance sessions to reduce musculoskeletal risk and support safe working postures; yoga and mindfulness sessions for physical fitness and mental restoration

Mandala art workshops as a creative outlet for stress relief and personal expression

Cancer awareness programmes focused on early detection and health management

One-on-one stress management counselling and group resilience sessions

Together, these programmes reflect Horizon's conviction that a thriving workforce is a productive one. By prioritising well-being, the organisation strengthens engagement, reduces burnout, and builds a culture of genuine care.

Employee Participation in Well-being Programmes

100%

Employee Satisfaction Score

Achievement

Measurable improvements were observed in physical, mental, and emotional health across employee cohorts:

Greater awareness of preventive healthcare and ergonomic safety practices

Stronger work-life balance, leading to higher satisfaction and retention

A reinforced culture of well-being that supports long-term organisational sustainability

Occupational Health and Safety

Health & Safety

At Horizon, safety is treated as a shared responsibility and a daily practice rather than a standalone process. Guided by a robust Occupational Health and Safety Management System certified to ISO 45001:2018, the organisation ensures structured risk management and continuous improvement across all operations.

Through proactive hazard identification, regular assessments, and active safety committee oversight, potential risks are addressed early. Preventive health programmes and periodic medical check-ups reinforce employee well-being.

Achievement

Zero reportable incidents sustained throughout the reporting period

Strengthened risk prevention through certified, integrated management systems

Improved safety awareness and compliance via ongoing training and toolbox talks

Enhanced workforce health through proactive medical monitoring and preventive programmes

A robust safety culture underpinned by active committee oversight and a commitment to continuous improvement

Full compliance with international standards and applicable regulatory requirements

100% workforce covered by OHS management system

167 training hours allotted for safety training

Human Capital Development

An open and transparent communication is at the core of a trusted and engaged workplace. At Horizon, we believe that keeping employees informed is essential to fostering a shared sense of purpose. We make efforts to ensure that employees remain aware of significant operational developments, workplace-related changes, and matters that may influence their work environment.

Our employee engagement mechanisms facilitate timely and effective communication across the organisation. By providing regular updates and encouraging dialogue, Horizon strengthens employee awareness of organisational developments, workplace practices, and operational transitions.

Employee Engagement

Through this culture of transparency and engagement, we ensure that employees remain connected to the organisation's evolving journey.

Training & Skill Development

GRESB Human Capital

Horizon believes that learning is the engine of progress and long-term success. We are committed to building a future-ready workforce that possesses the knowledge, skills, and practical expertise required to navigate the dynamic sustainability and ESG landscape while mastering core professional competencies.

During the reporting period, Horizon made a significant leap forward by implementing a Learning Management System (LMS). The LMS gives employees structured, accessible, and self-paced learning pathways, enabling them to progress at their own rhythm while gaining high-quality content.

Eight comprehensive modules on sustainable business practices, ESG principles, and the intersection of environmental stewardship with operational excellence were delivered, sharpening professional capabilities, workplace effectiveness, and overall organisational performance.

To further strengthen its sustainability journey, Horizon introduced IGBC (Indian Green Building Council) Training and Certification. These initiatives deepened staff understanding of green-building principles, sustainability practices and environmental responsibility while providing easier access to continuous learning opportunities.

The result was a measurable improvement in organisational readiness to advance Horizon's green-building ambitions and long-term climate commitments.

Complementing the digital curriculum, Horizon hosts regular knowledge-sharing sessions and learning programmes aimed at reinforcing technical acumen and cultivating personal effectiveness across all teams. By blending online courses with dynamic, real-time interactions, we foster a robust learning culture that nurtures curiosity, safeguards well-being, and sparks innovation.

Investing in lifelong learning and continuous capability building empowers Horizon's people with the confidence, knowledge, and skill set required to lead responsibly, adapt swiftly to emerging trends, and create enduring value in an ever-evolving global landscape.

Case Study

Building a Sustainability-Driven Workforce

HUMAN CAPITAL

Horizon developed and implemented a comprehensive digital ESG training programme through its Learning Management System (LMS).

The initiative comprised eight interactive training modules, including a foundational ESG course for all employees and specialised modules tailored to functions such as Design, Finance, Operations, Procurement, Projects, Leasing, and Marketing. The modules combined videos, quizzes, case studies, and practical workplace scenarios, enabling employees to understand the relevance of ESG within their specific roles.

Beyond compliance, the training has strengthened cross-functional collaboration, improved audit preparedness, and embedded sustainability considerations into planning, operations, procurement, and decision-making processes. Today, the programme serves as a cornerstone of Horizon's efforts to build a resilient, responsible, and future-ready organisation.

The LMS-based approach ensured seamless deployment, automated certification tracking, and audit-ready documentation.

Within a short period, Horizon achieved 100% workforce coverage for foundational ESG training, with all employees completing the required learning modules.

The programme also delivered over 169.33 total man-hours of structured ESG learning and significantly enhanced employee participation in sustainability initiatives.

GBC Accredited Professional (AP) Certification Initiative

GRESB Human Capital

Horizon enrolled its employees for five-day intensive IGBC AP training conducted by CII-RIGBC council to build internal expertise in green building, resource efficiency, and sustainable design/operations across key functions.

GBC AP training followed a structural approach

- ▶ Delivered by certified experts using a structured lifecycle approach (Design → Construction → Operation)
- ▶ Hands-on, case-based modules on IGBC ratings, energy and water efficiency, site planning, waste management, and material optimisation
- ▶ Pre-assessments and mock tests for IGBC AP exam readiness

40

total man hours delivered

Key outcomes of the training

- ▶ After completing the immersive training, participants appeared for the IGBC AP professional certification proctored examination, and 15 employees passed, becoming IGBC Accredited Professionals (IGBC AP).
- ▶ Built an internal pool of IGBC-certified professionals for green design, audits, and compliance
- ▶ Strengthened sustainability integration, certification readiness, and employee engagement in green initiatives

15

employees passed, becoming IGBC Accredited Professionals (IGBC AP)

Human Rights Practices

Horizon is committed to upholding fundamental human and labour rights across its operations and value chain. Supplier screening, due diligence processes, and compliance mechanisms are implemented to identify, assess, and mitigate risks related to child labour, forced labour, bonded labour, and other forms of involuntary work. The organisation maintains a zero-tolerance approach towards child labour and all forms of forced or compulsory labour and expects the same standards from its suppliers, contractors, and business partners. During the reporting period, no instances of child labour or forced labour were identified within the organisation's operations or supply chain.

Employee Relations and Workplace Rights

At Horizon, a positive, respectful workplace built on trust and open communication ensures all staff, internal teams, PMCs, facilities staff, and contractors can voice concerns without retaliation. We uphold labour rights as per national law and ILO standards, embedding freedom of association and collective bargaining in the Horizon ESG Policy, which is formally approved, communicated, and incorporated into contractor contracts.

A formal grievance framework via the ESG Grievance Mechanism and Whistleblower Protection procedures establishes confidential, anonymous reporting, clear escalation and resolution timelines, and anti-retaliation safeguards, fostering fair labour practices and a culture of trust and accountability.

Labour Management Relations

Horizon's commitment to responsible labour management is codified in contracts and reinforced throughout our vendor-management processes. Horizon continuously monitor adherence through periodic reviews and active engagement with PMCs and third-party contractors. As part of this framework, contractors are required to give workers a 30-to-90-day notice of significant operational changes such as demobilisation, scope reduction or site closure to safeguard fair treatment and minimise disruption. During the reporting period, no major operational changes resulted in large-scale workforce reductions or materially affected labour conditions, underscoring the effectiveness of our vigilant oversight.

Community Engagement and Social Impact

Fostering Collective Giving and Volunteerism #ShareASeat Campaign

GRI 413-1  GRESB Stakeholder and Community Engagement

Horizon successfully concluded the third year of its flagship #ShareASeat initiative, combining corporate giving with employee volunteerism. Employees sponsored a special movie-day experience for 150 individual children from underserved communities, contributing ₹75,000, Horizon matched this amount, mobilising a total fund of ₹1,50,000 for theater seating, snacks, and a fully managed outing.

Beyond financial support, Horizon volunteers actively participated in the event, assisting the children and creating meaningful community connections. The initiative reflects Horizon's commitment to sustainable CSR, fostering a workplace culture of giving while bringing joy and inspiration to local communities.

Powering Minds, Lighting Future: Solar Energy for Brighter Education

GRI 413-1  GRESB Stakeholder and Community Engagement

In collaboration with Green India Initiatives, Team Horizon distributed 200 solar lamps to students at Government Higher Primary School, Bilanakote, near our Dobbaspet park in Karnataka.

The initiative began on World Environment Day 2025 with awareness sessions led by Dr. Sachin Shigavan, the Solar Man of India, highlighting the importance of solar energy. Subsequently, 120 employee volunteers, including senior leadership, assembled and quality-checked the lamps before distributing them to the students.

This initiative reflects Horizon's belief in sustainability with purpose: bringing renewable energy to those who need it most, reducing carbon footprints while expanding human potential. By illuminating young minds, we illuminate futures-and that is the light we are proud to stand for.

Wheels of Hope: Enhancing Access and Continuity in Education

GRI 413-1  GRESB Stakeholder and Community Engagement

Horizon Industrial Parks championed a transformative school bus donation initiative for students at Rama Krishna School, Kamalapura (Vijayanagar District). The introduction of a dedicated, safe bus facility completely eliminated the hurdles of long-distance walking for students from remote areas who faced transportation barriers. This transformed a fatigued commute to a punctual and secure journey.

The tangible benefits of this mobility solution have reshaped the school's entire educational landscape. Student attendance has increased significantly, dropout rates have declined, and new student admissions have surged as distant families can now comfortably access schooling.

Beyond routine classes, reliable transport has opened doors to increased participation in outdoor learning, educational trips, and regional competitions. For students, traveling together has noticeably built greater discipline, social confidence, and excitement towards coming to school. From a community perspective, the bus facility has alleviated parental safety concerns and reduced household travel expenses.

It has proved especially transformative for girls and children from disadvantaged families, ensuring equitable access to quality education. By eliminating barriers to learning, reducing localized child labor risks, and fostering immense societal trust, this initiative reflects Horizon's core belief in sustainable social development that empowers future generations.

Training Youth for Tomorrow's Careers

GRI 413-1  **Stakeholder and Community Engagement**

In collaboration with the CII Institute of Logistics, Horizon launched a Skill Development Centre to train young people for careers in warehousing and logistics. Candidates are taught logistics processes, warehousing operations, industrial standards, and safety practices through a mix of classroom sessions and hands-on exposure.

For many, the Skill Development Centre is a bridge from learning to livelihood. Student beneficiaries have gained employment at ecommerce and quick commerce companies operating in our parks in NCR, reflecting its impact. By building a skilled workforce, the initiative supports occupiers' needs while creating opportunities for local communities.

Our Tenant Engagement Initiative

 **Tenant Engagement**

For Horizon, well-being is not bound only for our immediate employees. Our employee well-being initiatives also extend to include our tenant employees. We focus on bringing together tenant employees, companies, and on-ground teams across our parks to reinforce the importance of safety and well-being.

During Safety Week 2026, Horizon conducted awareness initiatives across 14 parks through interactive engagement programmes, communication campaigns, and collaborative activities with tenant organisations.

These programmes focused on:

- Workplace safety
- Self-defence
- Mental health
- Healthy lifestyles
- Overall employee well-being

The initiative aimed to strengthen safety culture and encourage responsible behaviour among employees, tenant companies, and on-ground teams.

 **More than 6,728 employees representing 88 companies participated in the initiative. This supported wider engagement and outreach across the park ecosystem.**

Our tenant-engagement initiative amplified safety awareness and elevated employee morale across the parks. The programme forged stronger collaborations between tenant companies, nurturing a proactive and inclusive culture of resilience and healthy workplace practices.

Tenant managers praised the effort, noting that it improved workforce motivation. They encouraged more employees to choose our parks as their preferred workplace.

Independent Assurance opinion Statement:

To Mr. Urvish Rambhia, Managing Director & CEO of Horizon Industrial Parks Ltd.

Holding Statement No: SRA 828624

The British Standards Institution (BSI) has conducted a limited level assurance engagement on the non-financial sustainability information (described in the "Scope" below) in the assurance statement for FY 2025-2026 (1st April 2025 to 31st March 2026) of Horizon Industrial Parks Ltd. (hereby stated as HIPL in the report ahead).

Scope

The scope of engagement agreed upon with Horizon Industrial Parks Ltd. includes the following:

The assurance covers the non-financial information of the following subject matters for the FY 2025-2026; the scope only includes the information provided under below disclosures (broadly quantitative in nature, mapped with relevant GRI topic standards).

Subject Matter	GRI Mapping	Parameter
GHG Emissions 2016	GRI- 305-1, 2	Total Scope-1 and Scope-2 Emissions
Water & Effluents 2018	GRI 303-3	Total water consumption (fresh water and flushing water consumption)
Energy Footprint 2016	GRI 302-1	Total Energy Consumed- RE and NRE (Landlord spaces)
Waste 2020	GRI 306-3,4	Total Hazardous and Non-Hazardous Waste Generated
Procurement Practices 2016	GRI 204-1	Procurement Practices impacting supply chain
Anti-corruption 2016	GRI 205-1,2,3	Significant risks related to corruption identified through the risk assessment and it's coverage.
Anti-competitive behaviour 2016	GRI 206-1	Number of actions pending or completed in the reporting period regarding anti-competitive behaviour
Materials 2016	GRI 301-1,2	Recycled input material used non-renewable material used
Employment 2016	GRI 401-1 to 3	New hire, turnover rate, employee benefits
Labor/Management Relations 2016	GRI 402-1	Minimum number of weeks' notice typically provided to employees and their representatives prior to the implementation of significant operational changes that could substantially affect them
Occupational health and safety 2018	GRI 403-9	Work related injuries (LTIFR, fatalities, etc.)
Training and Education 2016	GRI 404-1,2	Average training hours, skill based and other trainings
Diversity & Equal Opportunity 2016	GRI 405-1	Diversity of governance bodies and employees
Freedom of Association 2016	GRI 407-1	Operations and suppliers in which workers' rights to exercise freedom of association or collective bargaining may be violated or at significant risk

Child Labor 2016	GRI 408-1	Operations and suppliers considered to have significant risk for such incidents
Forced Labor 2016	GRI 409-1	
Local communities 2016	GRI 413-1,2	Percentage of operations with implemented local community engagement, impact assessments, grievance mechanism and/or development programs, Operations with significant actual and potential negative impacts on local communities
Customer Privacy 2016	GRI 418-1,2	Complaints concerning breaches of customer privacy and losses of customer data
Note: the scope does not cover review of the sustainability report, above GRI reference is given since organization has stated that while developing the disclosure information, it has referred GRI universal standards 2021(with reference option) while developing their ESG information and mapped with relevant topic standards.		

The boundary for the above-mentioned scope are captured in the Appendix- A in the opinion. The details of their boundaries within the scope is described in Appendix A in this independent assurance opinion statement. The scope of assurance engagement is limited to verification of historical non-financial information only.

Opinion Statement:

We have conducted a limited assurance engagement on the non-financial sustainability information described in the "Scope" above for FY 2025-2026 covering quantitative disclosures covered under the material KPIs.

Based on the procedures we have performed and the evidence we have obtained , nothing has come to our attention that causes us to believe that the accompanying Sustainability Information is not prepared, in all material respects, in accordance with the applicable criteria for the year 2025-2026

Methodology:

Our assurance engagements were carried out in accordance with ISAE3000 (Revised) and ISO 14064-3: 2019 assurance standard following the principles of Integrity, Objectivity, Professional competence and due care, Confidentiality and Professional behaviour. Our work was designed to gather evidence on which to base our conclusion. We undertook the following activities:

- Review of GHG inventory, energy, waste information at sample level and consolidation checks with central team.
- Interviews with staffs involved in sustainability management, ESG data compilation, and data collection at site and central level.
- Review of social data, it's calculations and sample evidence.
- Review of climate risk assessment study done for HIPL business.
- Review of supporting evidence and calculations checks for materially important KPIs.
- Review of data pertaining to the sampled 5 operational locations namely Farukhanage-1, Mappedu, Chakan, Chennai, central compilation and social data verification to confirm the data collection processes, record management practices, and check reported KPI's physically and through virtual mode.
- A summary sheet, compiling data from all operations and arriving on final numbers.

Responsibility:

HIPL is responsible for the preparation and fair presentation of the sustainability information in accordance with the agreed criteria. BSI is responsible for providing an independent assurance opinion statement performed at limited level

BSI Group India Private Limited

depth of assurance with (5% materiality threshold for Energy, GHG, related information) to stakeholders giving our professional opinion based on the scope and methodology described.

Independence, Quality Control and Competence:

BSI is independent to Horizon Industrial Parks Ltd. (HIPL) and has no financial interest in the operation of Horizon Industrial Parks Ltd. (HIPL) other than for the assurance of the non-financial sustainability information (quantitative information) contained under various material topics.

This independent assurance opinion statement has been prepared for the stakeholders of Horizon Industrial Parks Ltd. (HIPL) only for the purposes of verifying its non-financial statements relating to its environmental and social KPI's, more particularly described in the Scope above.

This independent assurance opinion statement is prepared on the basis of review by BSI of information presented to it by Horizon Industrial Parks Ltd. (HIPL). In making this independent assurance opinion statement, BSI has assumed that all information provided to it by Horizon Industrial Parks Ltd. (HIPL) is true, accurate and complete. BSI accepts no liability to any third party who places reliance on this statement.

BSI applies its own management standards and compliance policies for quality control, in accordance with ISO/IEC 17021-1:2015 and accordingly maintains a comprehensive system of quality control including documented policies and procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements.

BSI is a leading global standards and assessment body founded in 1901. The BSI assurance team has extensive experience in conducting verification over environmental, social and governance (ESG), and GRI Universal Standard 2021, AA1000AS, ISO10002, ISO 14001, ISO 45001, ISO 14064-1, ISO 14067, ISO 14068-1, ISO 50001, and ISO 9001, etc. The assurance is carried out in line with the BSI Fair Trading Code of Practice.
